SIP TRUNKING

Voice Calls Over The Internet

Upgrading to SIP Trunking is affordable and scalable with a host of benefits and is quickly becoming the number one voice solution for businesses. This is the perfect first step for any business looking to build its own unified communications platform.

You'll get more flexibility than with a traditional phone service, with the ability to take your number with you if you move or even market your business locally around the Australia with Area Call numbers.

How will our SIP Trunking benefit your Business ?

- *Reassurance that calls won't be missed.*
- *Keep people connected.*
- *Market your business nationally with local numbers.*
- *Make it easier for customers to contact you.*

Voice Services

REDUCE YOUR TELCO COST BY UP TO 50%

✔ Exceptionally Cost Effective

SIP Trunks are the most cost effective way of delivering business phone line capacity to a PBX phone system. Significantly reduce your line rental and call costs.

✔ Fully Portable and Scalable

No physical telephone lines to connect or relocate. Additional call capacity can be activated almost instantly. Connect or disconnect call lines to suit your current business requirements.

✔ Superior Functionality

Delivering the ultimate in business flexibility. SIP trunks can be deployed in a variety of ways including PBX Systems, IP handsets, a mobile app or a softphone application.

✔ Competitive Business SIP Plans

We deliver ultra-competitive carrier plans to our clients. It includes local and national calls with no setup fee or long-term contracts. You can use your existing number too.

Voice Services

DEPLOY SIP TRUNKS ACROSS MULTIPLE DEVICES

✓ PBX Systems

Telelink Business SIP can be used with all major PBXs. Connect them directly to the existing PBX and replace existing telephone lines to reduce line rental and take advantage of cheaper calls

✓ IP Phones

SIP trunks can be programmed directly into an IP phone which then becomes a functioning telephone with its own call line and phone number. To make and receive calls, all you have to do is connect the IP phone to an existing broadband service.

✓ Softphone Apps

You can transform your PC or laptop into a working phone by adding a SIP trunk to a softphone app. There are many softphone apps to choose from. Another option is to use a mobile app on your smartphone to make calls. This way, you can enjoy affordable local call rates even when you're traveling abroad.
